

GERMAN GLOBAL APPRENTICE PROGRAM 2019

COLLEGE OF BUSINESS & ENGINEERING

Where the city is your classroom

Business and Engineering are global disciplines. This summer program will transform how you think of the world and most likely change your future career trajectory through experiential learning, global competency development, and real-world connections. The Stuttgart region (part of the state of Baden-Württemberg) will literally be your classroom. This area is renowned as the export “engine” of Europe. Founded on precision manufacturing and engineering, the area has world class businesses to visit.

The Global Apprentice program is designed to be fast-paced, engaging and demanding. Every day is tailored to take advantage of our location. You will also learn how to navigate the German culture. You’ll be pushed out of your comfort zone, working with classmates you may not yet worked with before in an unfamiliar environment. This month-long program consists of faculty lectures, guest speakers, site visits, panels and company visits.
